

Knowledge exchange for people interested in landscape-scale planning for biodiversity

6:45 – 9:00pm Monday 8th September

Lecture Theatre 1, Geography and Environmental Studies Building

University of Tasmania

There is increasing interest in Tasmania and Australia-wide in managing biodiversity at a landscape scale. To help improve communication and collaboration, a series of 'knowledge exchange' events will be held to discuss recent research findings, introduce new tools and mapping layers, identify knowledge gaps and data needs and workshop future projects.

The intent is to host a night every 3 months for as long as there is interest. An email list will be sent out to anyone who expresses an interest in attending, and we will be searching for volunteers to give presentations for future sessions.

Who can come?

Anyone with an interest in landscape management of biodiversity is welcome. This includes researchers, practitioners, consultants, policy makers and those who are just interested...

People interested in attending can just arrive on the night, but it would be appreciated if they could let Kerry Bridle (Kerry.Bridle@utas.edu.au) know so wine and cheese can be ordered accordingly.

Program

The first session will kick off the day after Threatened Species Day, so will have a focus on threatened species.

- 6:45 pm Intro – *Kerry Bridle* (UTas)
- 6:55 pm Challenges with multi-scaled planning for Tasmania's threatened species – *Clare Hawkins* (DPIPWE)
- 7:15 pm Landscape scale planning for threatened species – *Amy Koch* (FPA)
- 7:30 pm Threatened species reservation versus conservation – *Josie Kelman* (Enviro-dynamics)
- 7:45 pm Data, spatial information, planning tools – *Louise Gilfedder* (DPIPWE)
- 8:05pm Open session for speed talks or general discussion
- 8:30pm Wine and cheese! (gold coin donation)
