

SPECIES MANAGEMENT PROFILE

Calystegia marginata forest bindweed

Group: Magnoliophyta (flowering plants), Magnoliopsida (dicots), Solanales, Convolvulaceae

Status: *Threatened Species Protection Act 1995:* **endangered**
Environment Protection and Biodiversity Conservation Act 1999: Not listed

Endemic: Found in Tasmania and elsewhere

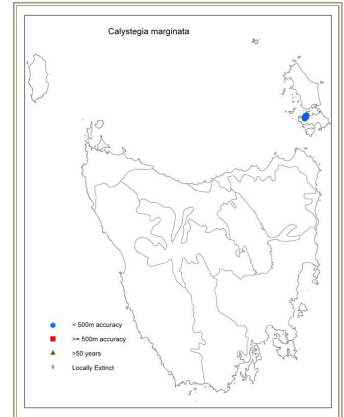

Status:

A complete species management profile is not currently available for this species. Check for further information on this page and any relevant Activity Advice.

Key Points

- **Important:** Is this species in your area? Do you need a permit? Ensure you've covered all the issues by checking the Planning Ahead page.
- **Important:** Different threatened species may have different requirements. For any activity you are considering, read the Activity Advice pages for background information and important advice about managing around the needs of multiple threatened species.

Surveying

Key	Survey reliability more info
M	Best time to survey
M	Potential time to survey
M	Poor time to survey
M	Non-survey period

To ensure you follow the law - check whether your survey requires a permit. Always report any new records to the Natural Values Atlas, or send the information direct to the Threatened Species Section. Refer to the Activity Advice: Surveying page for background information.

<i>Calystegia marginata</i>	Spring	Summer	Autumn	Winter
forest bindweed	S S O O N N	D D J J F F	M M A A M M	J J J J A A

- While peak flowering occurs over spring and summer, flowers are present on this perennial twining or prostrate vine all year, and as the plant is conspicuous, surveys for it can be undertaken at any time of year. However, plants are short lived and surveys for the species would be best conducted in the 2 years following fire or other disturbance likely to trigger emergence. It is possible that people chancing upon *Calystegia marginata* may at first mistake it for a weedy *Convolvulus* species.
- Within Tasmania, *Calystegia marginata* has only been found on Clarke Island where it was observed growing along creeks in granite gullies in forest or dry scrub.

Contact details: Threatened Species Section, Department of Primary Industries, Parks, Water and Environment, GPO Box 44, Hobart, Tasmania, Australia, 7001. Phone (1300 368 550).

Permit: A permit is required under the Tasmanian *Threatened Species Protection Act 1995* to 'take' (which includes kill, injure, catch, damage, destroy and collect), keep, trade in or process any specimen or products of a listed species. Additional permits may also be required under other Acts or regulations to take, disturb or interfere with any form of wildlife or its products, (e.g. dens, nests, bones). This may also depend on the tenure of the land and other agreements relating to its management.
