

SPECIES MANAGEMENT PROFILE

Coronidium gunnianum swamp everlasting

Group: Magnoliophyta (flowering plants), Magnoliopsida (dicots), Asterales, Asteraceae

Status: *Threatened Species Protection Act 1995*: listing as endangered under consideration (unofficial)
Environment Protection and Biodiversity Conservation Act 1999: Not listed

Endemic: Found in Tasmania and elsewhere

Status:

Coronidium gunnianum (swamp everlasting) is a small, upright, woolly perennial herb with small, round, yellow, daisy flowers. In Tasmania, it occurs in eastern and central parts of the State from the Cambridge to Hadspen in grasslands on heavy soils and riverine woodlands in areas often inundated. The restricted area of occupancy and low abundance puts this species at risk from losses due to chance or inadvertent events. Climatic changes such as increased temperatures, fires and drought may impact the species persistence and recruitment.

Key Points

- Important:** Is this species in your area? Do you need a permit? Ensure you've covered all the issues by checking the Planning Ahead page.
- Important:** Different threatened species may have different requirements. For any activity you are considering, read the Activity Advice pages for background information and important advice about managing around the needs of multiple threatened species.

Surveying

Key	Survey reliability more info
M	Best time to survey
M	Potential time to survey
M	Poor time to survey
M	Non-survey period

To ensure you follow the law - check whether your survey requires a permit. Always report any new records to the Natural Values Atlas, or send the information direct to the Threatened Species Section. Refer to the Activity Advice: Surveying page for background information.

- This perennial herb generally flowers from November to February but has sometimes been recorded flowering as early as October and as late as May.
- This species generally occurs in grasslands on heavy soils, or riverine woodlands on soils that are prone to inundation. It mostly occurs at low elevations under 100 m asl, but some mainland populations occur above 700 m asl

Permit: A permit is required under the Tasmanian *Threatened Species Protection Act 1995* to 'take' (which includes kill, injure, catch, damage, destroy and collect), keep, trade in or process any specimen or products of a listed species. Additional permits may also be required under other Acts or regulations to take, disturb or interfere with any form of wildlife or its products, (e.g. dens, nests, bones). This may also depend on the tenure of the land and other agreements relating to its management.
