

SPECIES MANAGEMENT PROFILE

Oreisplanus munionga subsp. larana Marrawah Skipper

Group: Arthropoda, Insecta (insects), Lepidoptera (butterflies, moths), Hesperiiidae (Skippers)

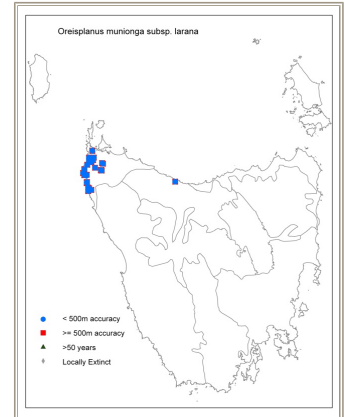

Status: *Threatened Species Protection Act 1995*: **endangered**
Environment Protection and Biodiversity Conservation Act 1999: Vulnerable

Endemic Status: Found only in Tasmania

The Marrawah Skipper (*Oreisplanus munionga subsp. larana*) is a brightly coloured butterfly, rich caramel brown above with pale yellow wing marking and pale yellow below. The Marrawah Skipper is a subspecies which is endemic to Tasmania; another subspecies is found in alpine areas of mainland Australia. Known only from the coastal and near-coastal areas of the northwest coast of Tasmania, it is exclusively associated with the tussock-sedge *Carex appressa*, which is its larval host and food plant. Its habitat ranges from dense *Carex appressa* sedgeland (e.g. along drains and forest margins) and swamp forest to plantations and pasture. The main threats to the Marrawah Skipper are clearing of coastal and near-coastal habitat, further fragmentation of subpopulations, and inappropriate disturbance including cattle grazing, weed invasion and forestry. The objectives for managing this subspecies include protection of known subpopulations, location of other subpopulations, and increasing understanding of the species' ecology.

A complete species management profile is not currently available for this species. Check for further information on this page and any relevant Activity Advice.

Key Points

- **Important:** Is this species in your area? Do you need a permit? Ensure you've covered all the issues by checking the Planning Ahead page.
- **Important:** Different threatened species may have different requirements. For any activity you are considering, read the Activity Advice pages for background information and important advice about managing around the needs of multiple threatened species.

This species management profile is not yet complete. Check for further information on this page and any relevant Activity Advice.

Permit: A permit is required under the Tasmanian *Threatened Species Protection Act 1995* to 'take' (which includes kill, injure, catch, damage, destroy and collect), keep, trade in or process any specimen or products of a listed species. Additional permits may also be required under other Acts or regulations to take, disturb or interfere with any form of wildlife or its products, (e.g. dens, nests, bones). This may also depend on the tenure of the land and other agreements relating to its management.
